Introduction

PIX Transmissions Limited, is the world's fastest up-coming Global Leader in Power Transmission Business, manufacturing V-belts, Hoses, Hose Assemblies, End Fittings & Engineering Products such as Pulleys, Tensioners etc. Its state-of-the-art manufacturing facilities in Nagpur, India, produces extensive range of products which includes entire range of Automotive Belts in various constructions such as Cut Edge Cogged, Wrapped, Ribbed/Poly V-Belts & Synchronous Belts.

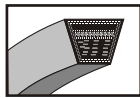

PIX Transmissions Limited is the largest exporter of V-Belts in India and is known as an Indian Multinational with subsidiary operations in UK, Brazil and Germany. It is a professionally managed company with hi-tech ultramodern facilities for the manufacturing of V-Belts & has its own R&D and Testing facilities.

Product Range

The company manufactures an extensive range of Automotive belts covering the entire field of applications, from mopeds to heavy vehicles, earth moving machineries & special construction belts, such as Lawn and Garden Belts, Variable Speed Belts, Anti-static & Fire Resistant Anti-static V-Belts.

Salient Features of PIX Automotive Belts

PIX Wrap Construction Belts

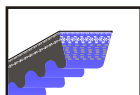

- ◆ Made up of high tensile polyester cord which enables maximum power transmission.
- ◆ Belts are oil & heat resistant and are capable to work in oily conditions.
- ◆ Offers good performance on high speed engines.
- ◆ Are abrasion resistant and offers smooth running.
- ◆ Offers higher power transmission on smaller pulley diameters.
- ◆ Conforms to DIN7753, BS AU 150b, SAE J 636, JASO E 107 standards.

Available Sections :

9.5, 12.5, AV 10, AV 13, A, B, 17, 19, 20.5 & C (All other sections are available on request).

PIX Cut Edge Belts (PIX X' tra)

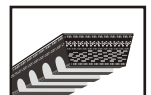

- ◆ They are suitable for ultramodern highspeed engines.
- ◆ Made up of high modulus low stretch tensile cord and are treated to carry higher loads without stretching.
- ◆ Made up of fibre reinforced rubber matrix base compound which ensures better grip and lateral rigidity.
- ◆ They are resistant to oil and heat.
- ◆ Suitable to operate on smaller pulley diameters.

- ◆ Suitable for HEMM applications.
- ◆ Conforms to DIN 7753, BS AU 150b, SAE J 636, JASO E 107 standards.

Available Sections :

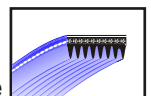

AVX 10, AVX 13, 17, 20, 22, 25, 13A, 17A, 20A, 22A, 25A (All other sections are available on request).

PIX Variator Belts :

- ◆ Are suitable for high speed engines.
- ◆ Made up of fibre filled compound which provides high stability and minimises deflection.
- ◆ Made up of specially engineered cords for high power transmission and length stability.
- ◆ Made up of moulded cogs for extra flexibility which ensures a better heat dissipation.
- ◆ Specially cut belts for uniform contact with the sheaves.
- ◆ Available in Aramid / Kevlar cord constructions.

PIX Ribbed V-Belts (PIX X' power)

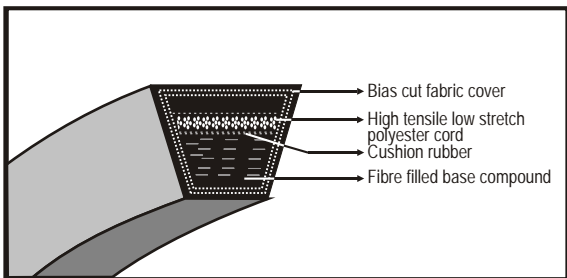

- ◆ Made up of Trapezoidal face ribs on fibre reinforced rubber matrix of base which gives high power transmission, good wear to resistance and quiet running.
- ◆ Offer less vibrations and absorbs shock.
- ◆ Offers excellent behaviour under tension with low stretch.
- ◆ Are extremely flexible and are capable to work on small pulley diameters & serpentine drives.
- ◆ Oil & heat resistant.
- ◆ Are suitable for HEMM applications.
- ◆ Conforms to ISO 9981, 9982, RMA IP 26 specifications.

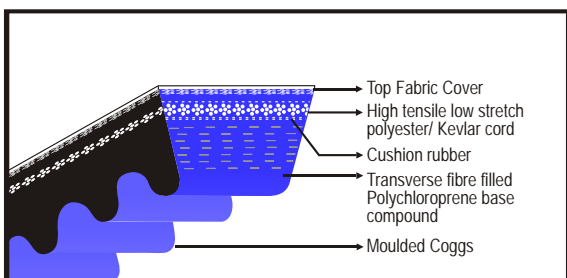

Available Sections :

K/PK, H/PH, J/PJ, I/PL & M/PM

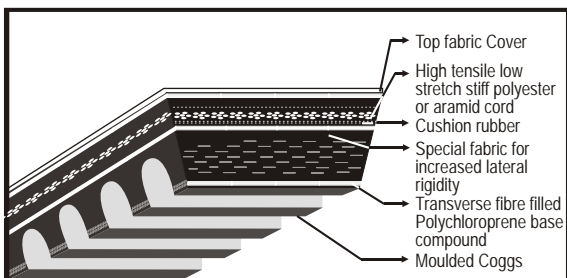

Constructional Features

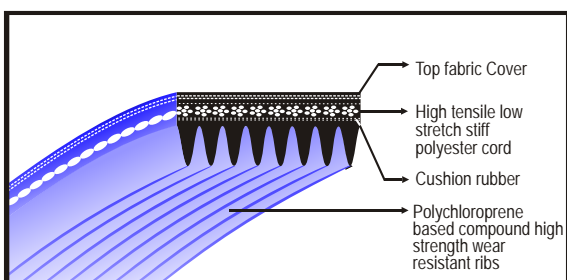

Wrap Construction Belts

Cut Edge Belts

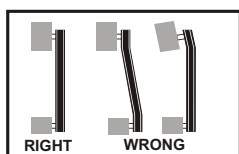

Variator Belts

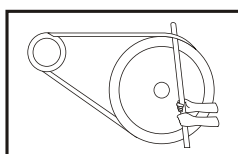

Ribbed Belts

Installation Tips

Ensure perfect alignment of pulleys

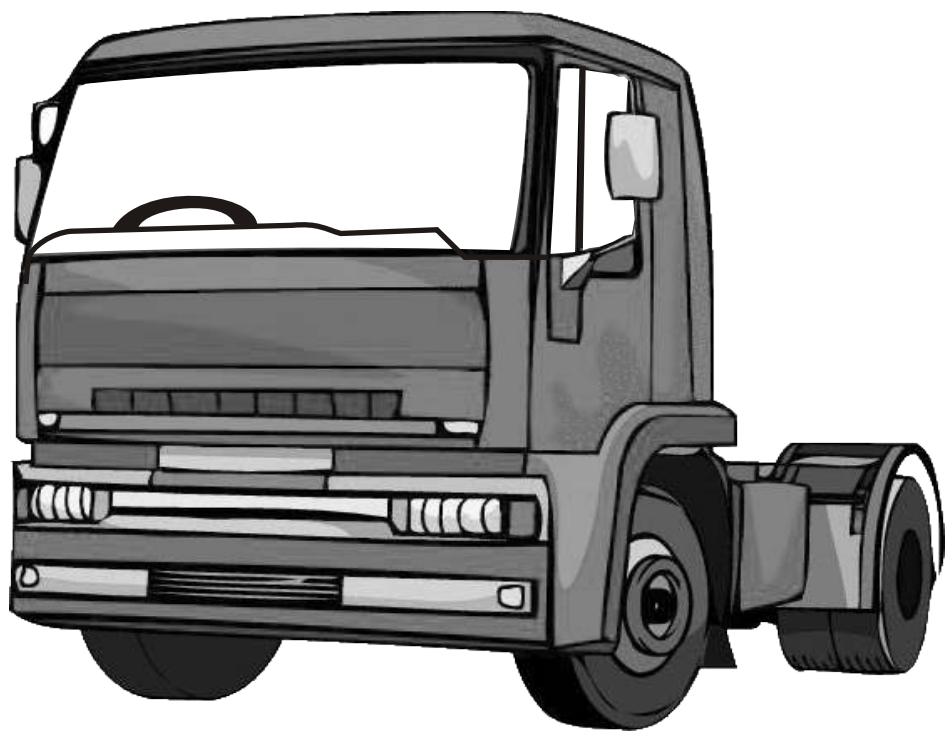

Do not pry or roll V-belts into the Pulley grooves

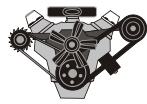

Possible Causes and Failure:

- 1) **Belt Top width Incorrect** : A belt which is too wide for a particular application will fit ride out over the pulleys, causing the sheaves to cut the ride side of the belts. Similarly belt with too narrow width will ride in on the pulleys and it may even contact the base instead of the flanges. This will result in belt slip because the adjustment is insufficient to provide the necessary tension.
- 2) **Wrong Belt Angle** : In its free state the belt angle is slightly larger than the pulley angle. The two angles become the same when the belt is flexed round the pulley, and so maximum contact is obtained. Too large or too small belt angle may reduce the contact area and increase its working pressure resulting in early failure of the belt.
- 3) **Incorrect Fitting Method** : If excessive force or lever is used when fitting a new belt, it is possible that the internal structure particularly the tension cords may get damaged or broken. Cut marks may also be developed on the belts. Similarly the pulley flanges may get damaged, resulting in short belt life.
- 4) **Excessive tension** : This will create undue wear on the belt, pulleys, water pump and generator bearings. It may lead to a premature failure of the belt.
- 5) **Slackness** : This will cause belt slip, producing squeal, excessive heating and abrasion. It will also result in a reduced generator charging rate and over heating of the engine. This will generate a squealing noise.
- 6) **Contamination** : Oil, grease, or any similar contaminant will reduce the coefficient of friction between the belt and the pulleys, causing belt slip and generation of excessive heat. Fan belts should run dry and no lubricant should be applied.
- 7) **Misalignment** : Pulleys which are bent or out of alignment with each other causes the belt to flex at least once every revolution. This may result in premature belt failure and undue wear on water pump and generator bearings.

Storage :

- ◆ Do not expose belts to direct sunlight and keep them away from the vicinity of magnetic field generating devices eg. transformers or motors.
- ◆ Always keep the belts in cool and dry place.
- ◆ Store the belts in a shelf or hung them on racks. Avoid placing belts on the floor.
- ◆ Avoid storing belts in heavily bent or piled condition.
- ◆ Keep the belts away from oil, grease and steam.
